RIFT MSWIPE

verifiable reconciliation for payment operations

Huddle Global 2026

Eagle Eye Research and Deployment Labs

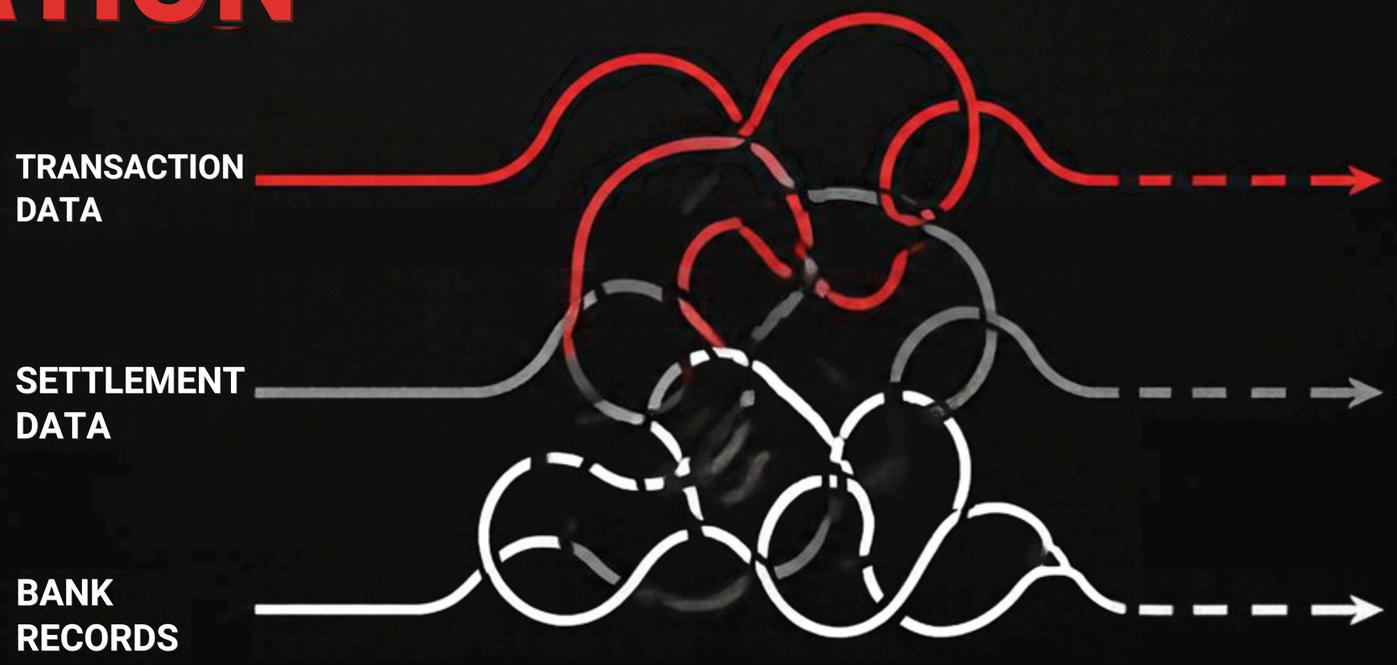

THE RECONCILIATION GAP

Transaction, settlement,
and bank records often diverge.

Mismatches multiply across
systems and formats.

Investigations demand
expertise and significant
manual effort.

Time is lost. Risk increases.

WHERE RIFT FITS

Proposed read-only workflow

SOURCE DATA
Transaction exports
Settlement files
Bank records

HUMAN REVIEW
Expert validation and resolution

RIFT complements Mswipe merchant operations

- Adds a focused analysis layer for conciliation exceptions
- Enhances visibility and audit readiness
- Designed to work alongside existing teams and processes

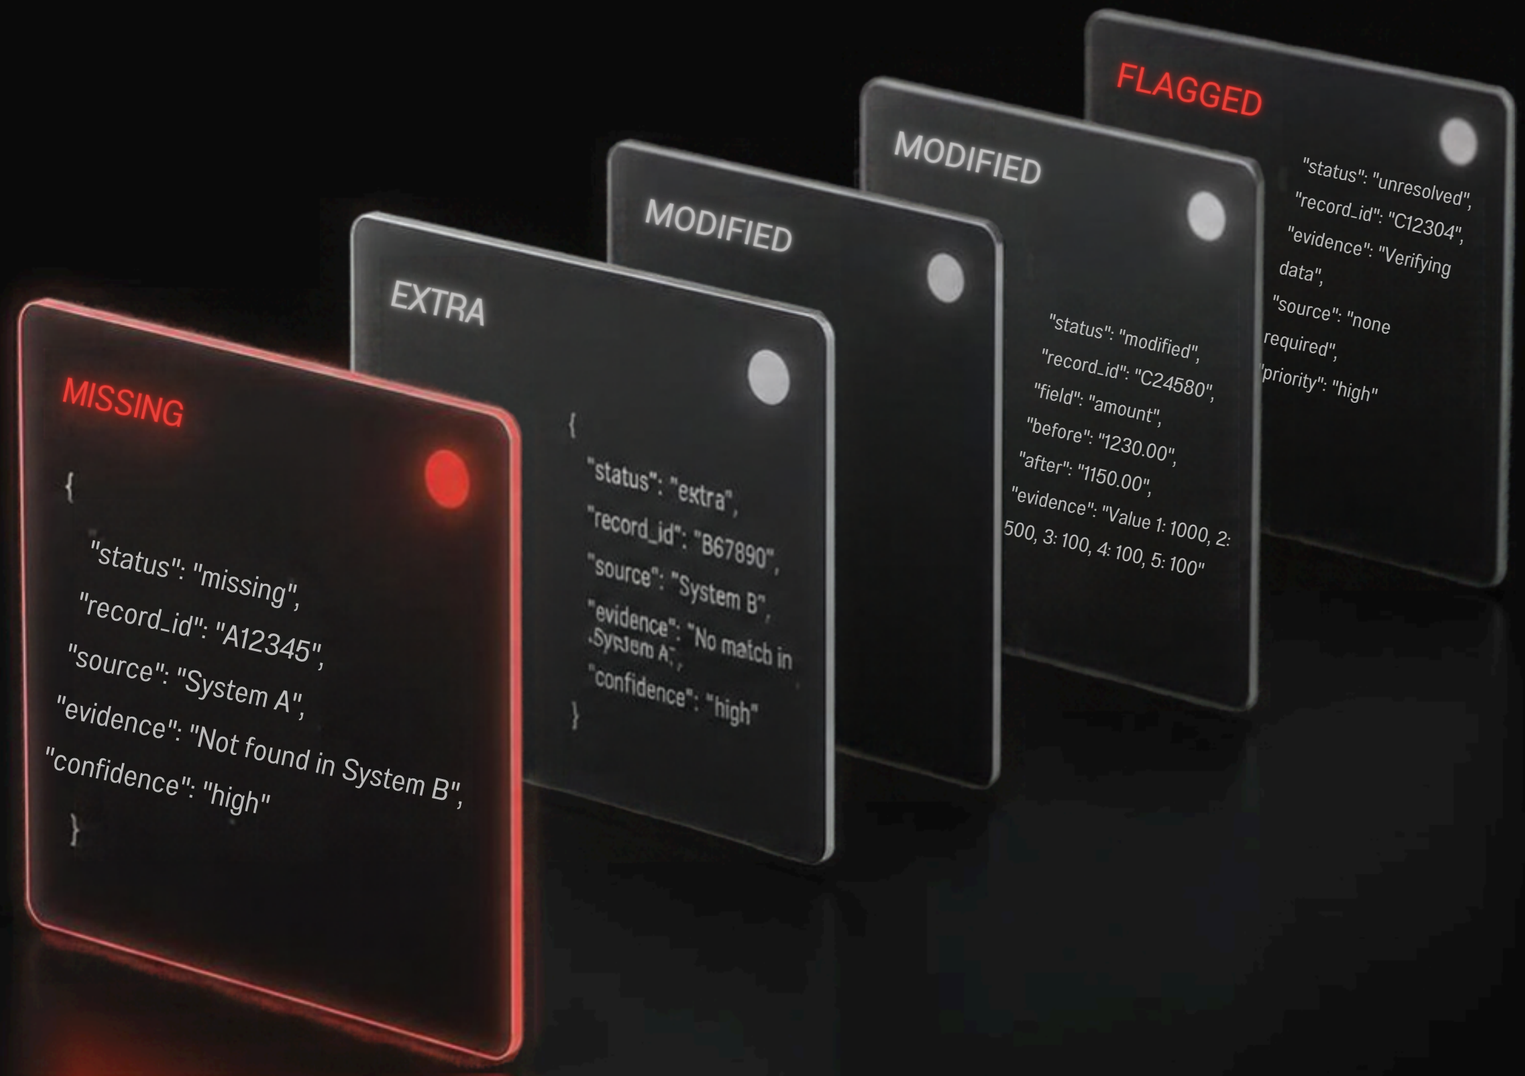

WHAT RIFT DOES

Compares records with precision to find what's missing, extra, or modified.

Delivers structured JSON outputs with clear evidence for review.

Flags unresolved issues for human follow-up.

WHY A RUST CLI

Lightweight and easy to deploy on schedules or containers

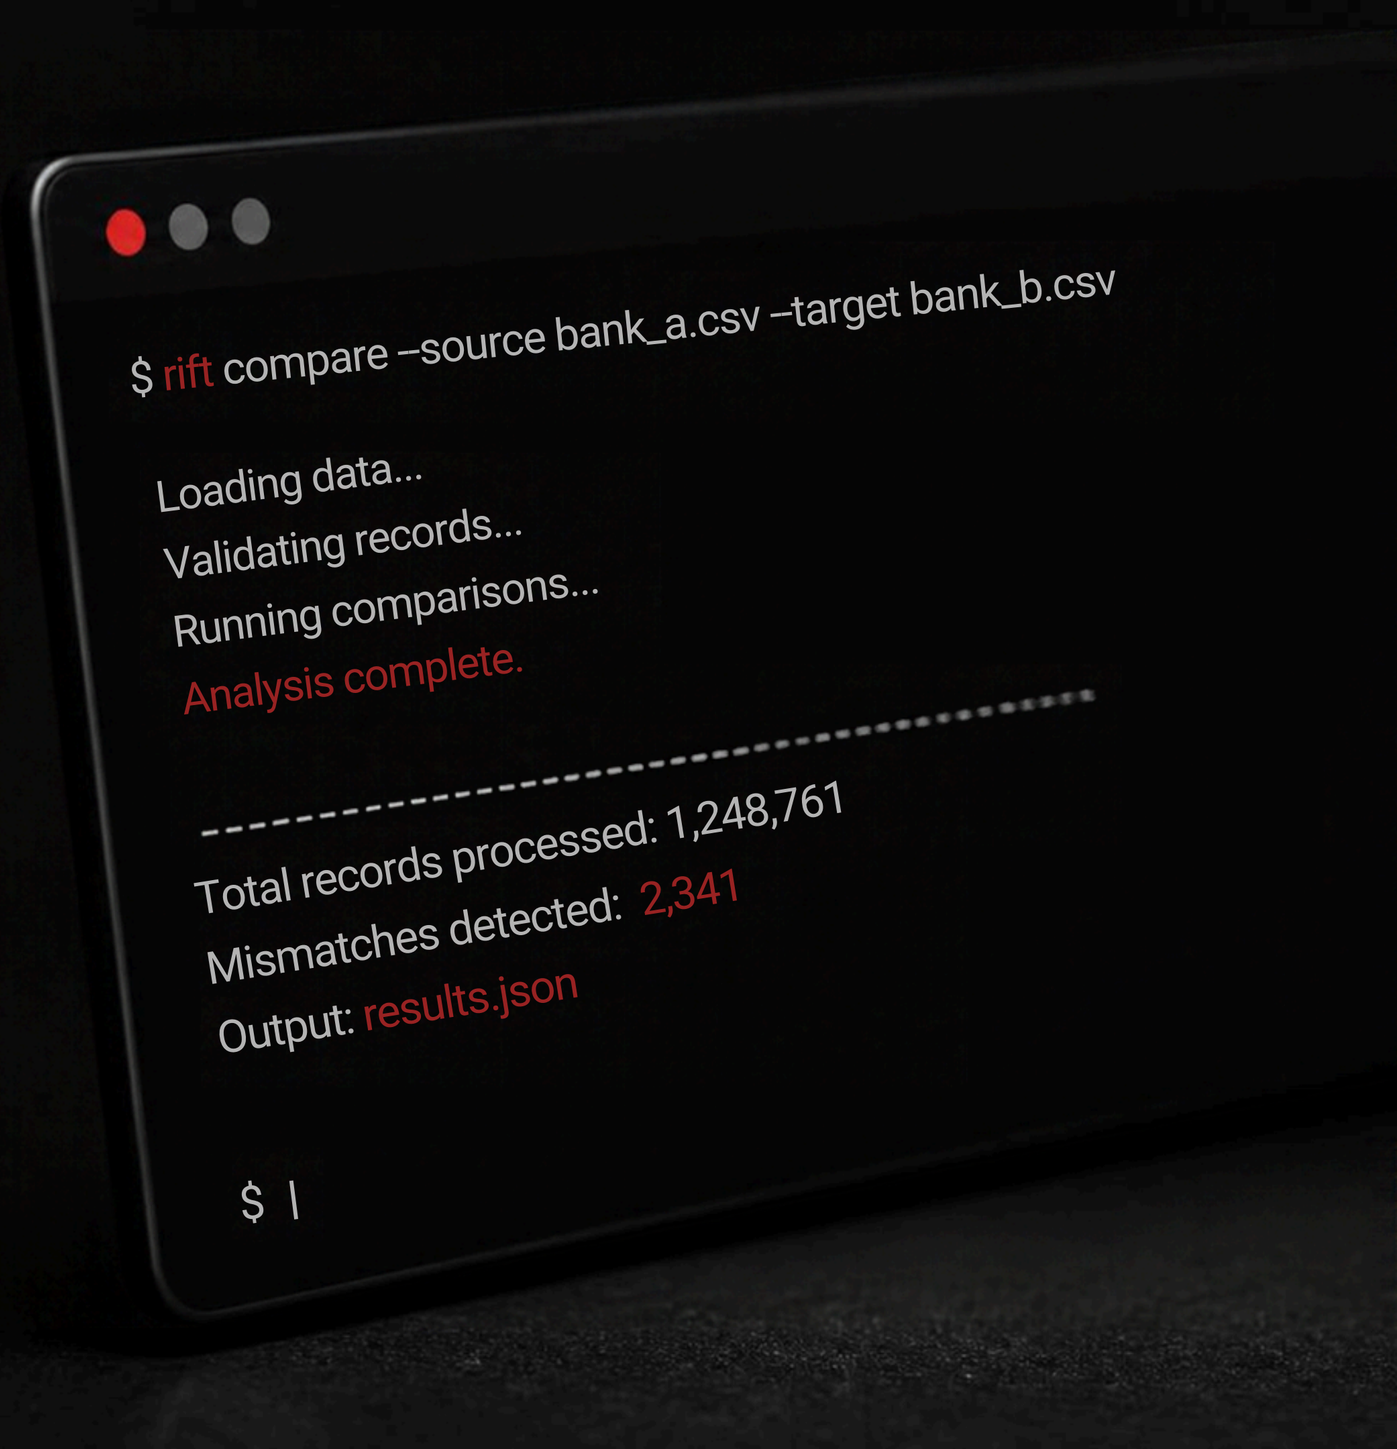

Generates machine-readable outputs for seamless integration

No permanent application tier required

LLM not required for core comparison

Built for operational flexibility and reproducible runs

BENEFITS SUBJECT TO VALIDATION

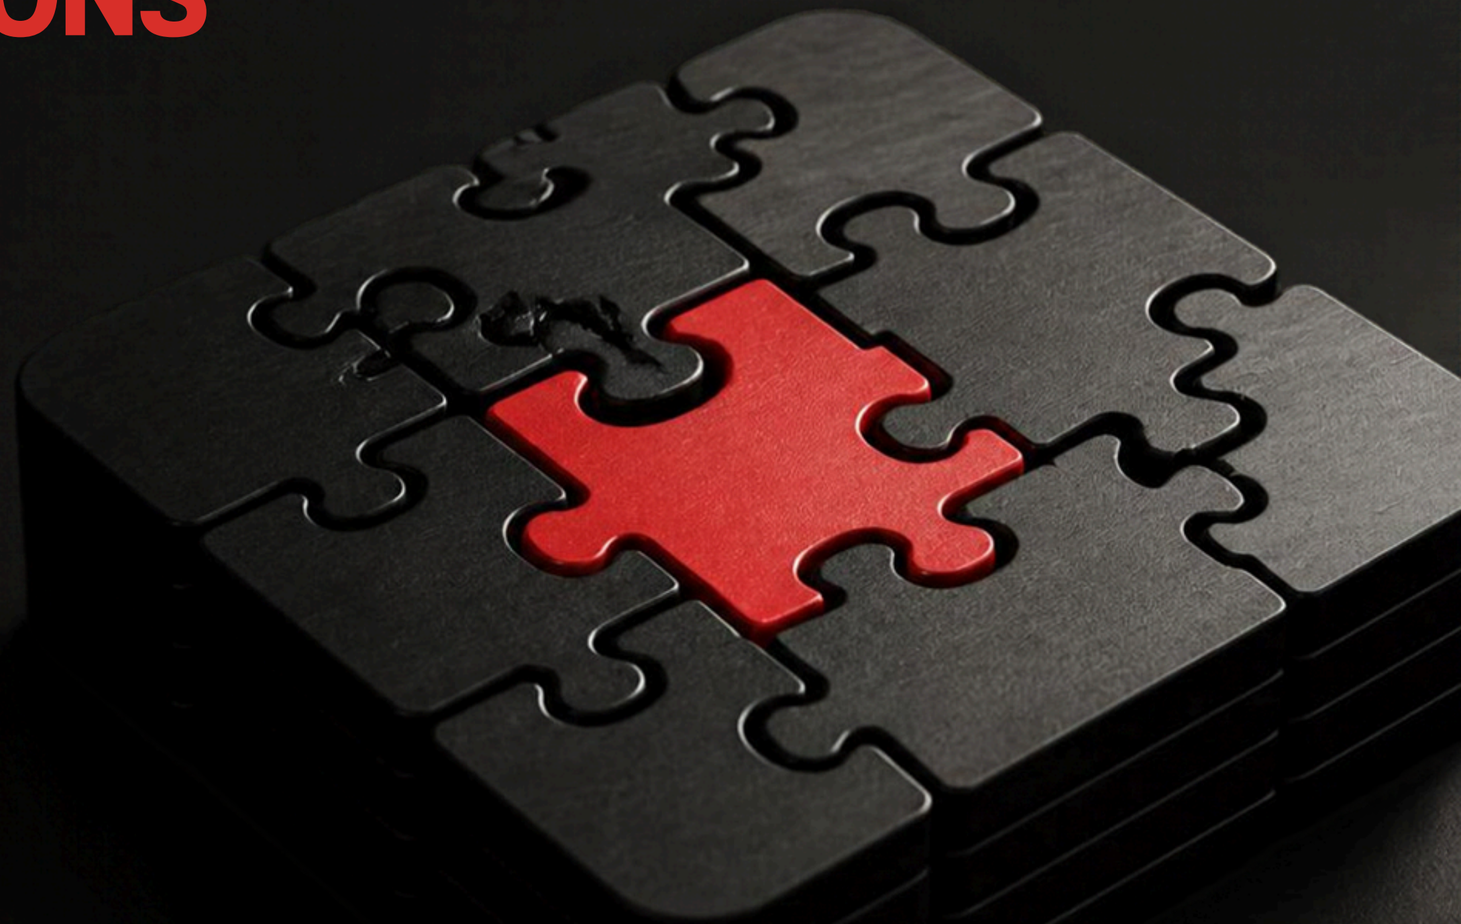

RELEVANT MSWIPE APPLICATIONS

Settlement mismatches

Missing credits or duplicate entries

Chargeback evidence preparation

Cross-system conciliation

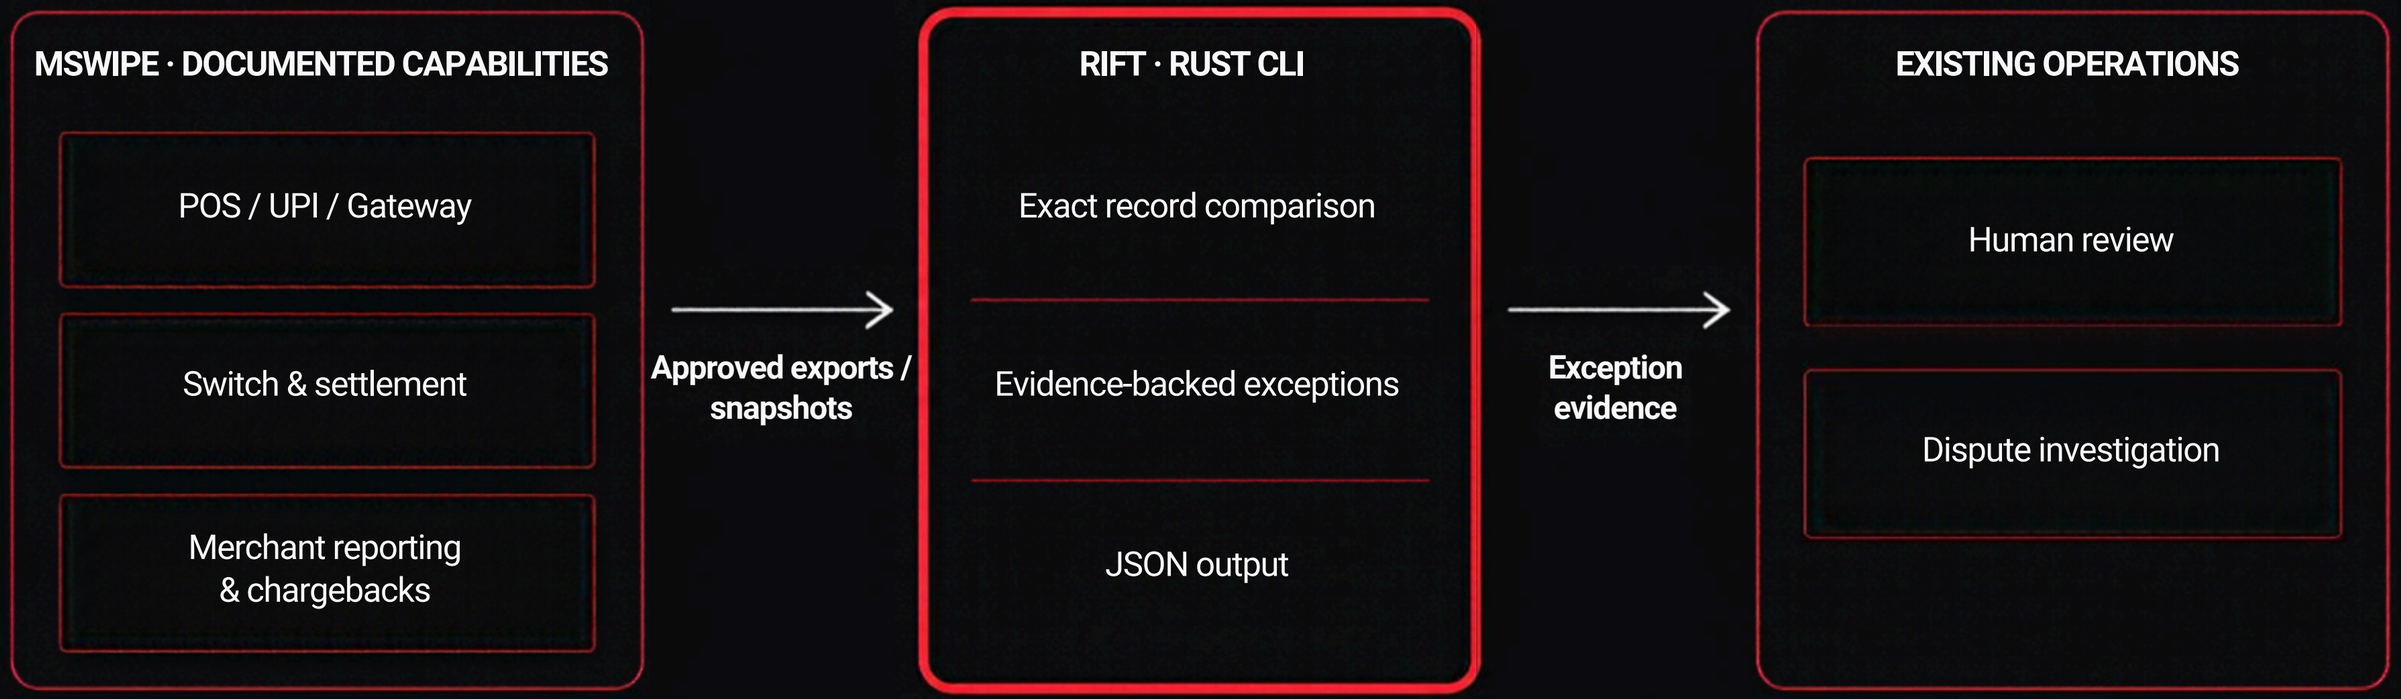

These use cases are proposed concepts and not tested outcomes.

Aligned with Mswipe services.

Fits Mswipe’s existing architecture

Proposed, read-only integration for a value-driven PoC

PoC fit: scheduled or containerized read-only job; no changes to payment authorization or settlement.

Validate: matched exceptions · investigation effort · runtime & memory · audit evidence.

Actual internal technologies and integration access to be confirmed with Mswipe.

BUSINESS VALUE TO VALIDATE

POTENTIAL BENEFITS

Reduce manual research effort

Improve traceability and auditability

Accelerate exception triage

Lower integration footprint

VALIDATION METRICS

Time per exception

Detection accuracy

Compute cost

Audit trail completeness

Validation will be collaborative, phased, and aligned on measurable outcomes.
